

Spacelabs Healthcare produces clinically beneficial, cost-effective monitoring and clinical information systems. As part of our commitment to the continual development of our product line, we have released the latest version of the product listed below. This bulletin is designed to inform you of the new features or enhancements. Thank you for your continued support.

### Update specifications

Updated System Components	SafeNSound 96180
Software Version	5.9.1

### New features or enhancements

SafeNSound™ software version 5.9.1 is a release which includes only minor bug fixes.

Expected downtime for this update is 15 minutes, with 45 minutes of potential degraded service. However, this downtime may vary depending on what version customers are currently on. Users are forced out and required to log back into SafeNSound once the update has been completed. For enterprise customers, please email [devops@spacelabs.com](mailto:devops@spacelabs.com) to request to be updated to this latest version.

### Bugs

- Device Discovery - Resolved defect with device discovery metadata processing incorrectly.

### Supported versions

- Web client version 8.0+
- Mobile version 5.0+

### Rollback plan

SafeNSound v5.9.1 would be restored to SafeNSound v5.4.0 and XprezzNet v2.0.1+ would be restored to XprezzNet v1.3.6. The SafeNSound Mobile software v5.0 would be rolled back to the Mobile software v3.2.1, which is the version currently published to the App Store.
